

Technology Stack

Date	06 July 2026
Team ID	_____
Project Name	Health History Organizer
Maximum Marks	2 Marks

Define Your Technology Stack

Identify the programming languages, frameworks, databases, frontend tools, backend tools, and APIs used to build the Health History Organizer. The selected technology stack provides scalability, maintainability, security, and efficient development.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML5, CSS3, JavaScript, Bootstrap 5	Responsive and user-friendly interface for entering, searching, and viewing health records.
2	Backend / Server-Side	Python 3.11, FastAPI, Uvicorn	High-performance REST APIs with asynchronous request handling and easy scalability.
3	Database / Data Storage	SQLite + SQLAlchemy ORM	Secure relational storage for medical records with lightweight deployment and ORM support.
4	Cloud / Hosting / Deployment	Render	Simple cloud deployment, automatic builds, and cost-effective hosting for the application.

5	Version Control & CI/CD	Git & GitHub	Collaborative development, version tracking, and centralized repository management.
6	Third-Party APIs / Other Tools	OpenAI API, Pydantic, python-dotenv, python-multipart	AI-assisted health summaries, input validation, secure configuration management, and form/file handling.
